

MEETING PACK

Meeting with the Executive Mayor

What to say, the numbers that hold up, the numbers that do not, and who to contact.
Companion to the pitch deck — the deck makes the argument, this pack gets you through the room.

Production live & current

2 rows awaiting verification

10 live feeds

Prepared 14 August 2026 · Municipality CPT · Data through August 2026
Repository ganyegg/striops · commit c192b8f · deployed and verified

01 Read this first

The system is live, current and defensible. Production spent three weeks serving stale code and now runs today's build with data through August 2026. Three faults that would have cost you the room were found and fixed this week: two service series that appeared to double in a month, a Wins page that contradicted the Pulse, and crime that was eleven months out of date. **What remains is preparation, not engineering** — sections 06 and 10.

R180k

90-day pilot, fixed

02 The sixty-second answer

IF THE MAYOR ASKS "WHAT EXACTLY IS THIS?"

"Striops is a Strategic Intelligence Operating System. It keeps a continuously-updated, source-linked model of the city — money, water, energy, safety, waste — and runs forecasting, risk and simulation over it to produce a daily executive brief with recommended decisions. Every number carries its source. The AI writes the prose; it never writes the arithmetic. It is not a dashboard, not a consultancy report, and not a chatbot on a data lake."

“Because your quarterly reports are true on the day they are printed and stale by the time you act on them. Striops holds the same facts, refreshed continuously, and it remembers why every decision was made. Non-revenue water alone costs the City roughly R185 million a year for every percentage point of system input lost. The pilot costs R180,000. If it changes one decision by a thousandth of a percentage point, it has paid for itself.”

Both answers are drawn from docs/STRIOPS.md §0 and §7 and are consistent with the pitch deck.

03 Numbers you can defend in the room

Every row below is live or official in the running system today, with its own period label and source. If challenged, each has a click-through in the app to the series and the publisher.

INDICATOR	LATEST	PERIOD	SOURCE	STANDING
Dam storage — Cape Town system	78.2%	Week of 10 Aug 2026	DWS weekly State of Dams	Live
Dam storage — same week last year	88.1%	Aug 2025	DWS weekly State of Dams	Live
Municipal arrears (consumer debt)	R8.95bn	Mar 2026	CoCT Open Data	Live
System energy sent out	808,016,255 kWh	Aug 2026	CoCT Open Data	Live
Electricity billed	4,038,548,576 kWh	Jun 2026	CoCT Open Data	Live
Murders	274 / month	Mar 2026	SAPS quarterly release, station level	Live
Contact crime	6,128 / month	Mar 2026	SAPS quarterly release, station level	Live
Audit outcome	Unqualified — no findings	Latest	AGSA via National Treasury	Official
Population	4,772,846	Census 2022	Stats SA	Official

Source: Striops /pulse and /themes in production, 14 Aug 2026. “Live” means fetched from the publisher, not curated by hand.

Crime is now as current as SAPS allows

The extract runs to **March 2026** — the last quarter SAPS has released. It is read directly from the station-level sheet inside each SAPS quarterly workbook and summed across Cape Town's 62 precincts, so the remaining lag is the national publication cycle and nothing else.

If asked: "SAPS publishes a quarter at a time, so March is the newest official month in the country. Striops reads their station sheet directly and labels the lag rather than hiding it. Wire the City's own precinct extract in the pilot and it becomes monthly."

One caveat before you quote the crime movement

Pulse reads "murders up 18.6%, February to March 2026" (231 to 274). That is the published monthly count, but February is a 28-day month — per day the rise is nearer 7%.

Quote the levels, not the month-on-month percentage. Over the quarter the direction is genuinely **down**: 781 murders in January–March 2026 against 864 in the same quarter of 2025.

04 The money case

This is the argument that survives a CFO. It rests on stated unit economics, not on a claim about the software.

QUANTITY	VALUE	BASIS
Illustrative bulk system input	370 million kl/yr	~1 GL/day order of magnitude
Blended production and pumping cost	R5.00 / kl	Conservative; excludes retail tariff and scarcity premium
Cost of 1.0 percentage point of non-revenue water	R185m / yr	370m kl × R5 × 1%
Annual cost of non-revenue water at the current level	R5.14bn / yr	Striops risk valuation, confidence 0.72
Pilot fee	R180,000	Fixed, 90 days, once-off
Break-even recovery	0.001 pp	Held for one year, on water alone

Assumptions are published in `datasets/seed/valuation/CPT.json` and surfaced through the API at `/valuation` so the City can challenge each one.

The seeded action `act-nrw-leak-crews` targets 0.5 pp of recovery, or roughly R92.5m a year. Even at one-fiftieth of that — 0.01 pp, from earlier visibility and a named owner — the return is about R1.85m a year, roughly ten times the pilot fee, every year the gain holds.

Price ladder

TIER	PRICE	SCOPE
90-day pilot	R180,000 once-off	Two live integrations, daily brief, provenance audit, action tracker, value ledger, decision register, success test
Striops Core	R95,000 per month	Daily brief, monitored feeds, re-verification, Pulse, actions, ledger, unlimited executive seats

TIER	PRICE	SCOPE
Striops Command	R160,000 per month	Core plus simulation, all domains, ward-level twin, priority integrations, quarterly reviews

The pilot is deliberately set under the roughly R200,000 competitive-bid threshold under MFMA supply-chain practice, so it can proceed on written quotations where City policy allows. Speed is part of the offer.

05 The artefacts, and how the system handles them

Two City service series broke range in June 2026. The Pulse used to assert them as month-on-month findings, which would not have survived contact with the relevant director. The system now screens them and says so. **The demo is stronger because of this, not weaker — lead with it rather than hoping nobody clicks.**

HOW THE SCREEN WORKS

A reading more than twice — or less than half — the median of its own previous six periods is marked **awaiting verification** instead of being reported as a change. Those rows are dropped from the worsening and improving counts and sorted below the metrics that can defend themselves. The rule is deliberately blunt so you can restate it in one sentence in the room.

SERIES	JUNE 2026	MEDIAN, PRIOR 6	BREAK	NOW SHOWN AS
Refuse service requests	28,604	11,529	2.5×	Awaiting verification
Public lighting outages	43,588	9,357	4.7×	Awaiting verification

Both break in the same month, which points at one shared cause — most likely a change in how C3 service requests are categorised or de-duplicated. The refuse extract also records 336 for September 2025, which is plainly broken and is screened on the same rule.

AND JULY PROVES THE POINT

July 2026 came back to baseline — **10,205** refuse requests and **9,719** lighting faults, both squarely in the historical range. So June was a transient extract fault, not a service collapse. The rows stay flagged because June is the comparison month, and any June-to-July percentage would be just as false in the opposite direction.

SAY THIS WHEN THE FLAG APPEARS ON SCREEN

“That row is the product refusing to lie to you. Refuse complaints did not treble in June — the extract changed, and July came back to normal. A quarterly report would have printed the spike as a service collapse and someone would have spent a month responding to it.”

Still do not present these two as findings

Two different dam levels, both live. The City series shows 61.35% for January 2026 and stops there; the DWS system reading is 78.2% for the week of 10 August 2026. They are seventeen points apart because they measure different things over different periods. Present the DWS figure as the current position and the City series as the City's own historical record — never side by side without that sentence. The comparison worth making is year-on-year: **78.2% now against 88.1% the same week last year**, roughly ten percentage points down.

The underspend amounts. The R1.21bn on Water and Sanitation and R0.88bn on Roads and Transport come from demonstration full-year function totals, not the City's official mid-year position for FY2025/26. The system labels them and so must you. Sell the method, not the amount: "this is the shape of the analysis — wire the S52 tables in the pilot and it becomes your number."

06 Before you walk in

The engineering blockers are cleared. What is left is sequencing and rehearsal.

- 1 Brief the officials before you request the meeting.** The City's published process asks you to list who you have already consulted — so this is not optional courtesy, it is a requirement of the request. Start with **Gareth Morgan** (ED: Future Planning and Resilience) and **Kevin Jacoby** (CFO). Brief **Jason Mc Neil** (Urban Waste Management) too, so the refuse artefact reaches him from you rather than from the Mayor.
- 2 Rehearse the two flagged rows out loud.** You should be the one who introduces them. The script is in section O5 and it takes fifteen seconds.
- 3 Clear the two overdue actions or restate their dates.** act-refuse-capacity was due 30 June and act-pipe-programme-report 31 July. An accountability product showing its own overdue items is either an honesty asset or an unforced error, depending entirely on whether you raise it first.
- 4 Open the live site once, the morning of.** It is current and all routes serve, but a cold free-tier instance takes about sixty seconds to wake. Load it before you walk in so the first click in front of the Mayor is instant.

TURN THE OVERDUE ACTIONS INTO THE ARGUMENT

"Two of the five actions in here are overdue, and the system says so on its own front page. That is the point. A report cannot embarrass you in nine months' time. This can, which is why it changes behaviour."

Fixed this week

- **Production is current.** Three weeks of work had never reached GitHub, so Render had nothing to deploy. All routes now serve today's build, verified end to end.
- **Crime is current to March 2026.** The previous extract came from a volunteer project that stopped updating in December 2025, freezing Cape Town at September 2025. Striops now reads the station-level sheet inside each SAPS quarterly workbook directly. The new parser reproduces the old extract exactly across all 69 overlapping months, and adds six.
- **Outlier screening.** Refuse and lighting are flagged rather than reported as findings, and excluded from the headline counts.
- **The Wins page no longer contradicts the Pulse.** It claimed streetlight faults were falling 2.7% per period, from a stale seed series, while the Pulse read up 116%. Curated wins that cite a metric are now re-tested against that live series on every read; anything unsupported renders as **Under review**.

- **No more future-dated numbers.** The City's energy dataset carries rows for the rest of the financial year alongside actuals, so the site was reporting "system energy down 9.5%, November to December 2026" — in August. Points beyond the current month are now dropped at ingest and again when the Pulse is built.
- **Dam storage is current and comparative.** The DWS weekly reading reaches the Pulse and carries the published year-ago figure, so the movement means something.

07 What the system is genuinely finding

Lead with these. They are the reason to keep talking, and each has a named owner and a rand figure already attached.

FINDING	SCORE / VALUE	OWNER	STANDING
Escalating non-revenue water losses, projected past 28% next period	106 R5.14bn/yr	Director: Water and Sanitation	Critical
Growing road maintenance backlog, projected to 1,715 km	95.7 R68m avoided	Director: Urban Mobility	Critical
Lengthening clinic waiting times	92.3	Community Services and Health	Critical
Slower EMS response times	90.8	Community Services and Health	Critical

Source: Striops /risks and /health-breakdown. Clinic, EMS, non-revenue water and roads currently run on demonstration series — the mechanism is real, the inputs need the departmental extracts named in section 11.

The value ledger carries R68m on roads and R92.5m on non-revenue water, both marked **projected** and **needs_verification**. Say that plainly. Nothing is claimed as realised until a decision is taken and delivery starts, and that discipline is a selling point rather than a weakness.

08 The ask

Do not ask for a budget decision in the room. Ask for the two things that make the next conversation inevitable.

ONE

A data-sharing MOU, aggregates only

No citizen personal information in scope. The two extracts that unlock the most value: Finance **S52 year-to-date** operating and capital tables, and Water and Sanitation's official annual **system input and zone-level non-revenue water**. Those turn the largest demonstration numbers in this pack into official ones.

TWO

A named sponsor and a 90-day pilot

R180,000, measured against a written success test agreed up front. A named executive sponsor matters more than the money — without one, the feeds never arrive.

THE CLOSE

“Give me two feeds and ninety days. If at the end of it the daily brief has not changed a single decision, do not renew — and you keep the data, the exports and the schema regardless. There is no proprietary lock on your own facts.”

09

Objections, and the answers

IF THEY SAY	YOU SAY
"My team can produce this report."	Once. Striops produces it every morning from live systems, every number able to defend itself, and it never forgets why a decision was made.
"Is this live City data?"	Today: curated seed plus live public feeds — Treasury, SAPS, DWS, Stats SA and AGSA. In the pilot: Finance and Water live. The feed panel in the product always states which, per source.
"AI makes things up."	The AI writes prose only. Scores, forecasts and rand figures are deterministic and assumption-linked. Remove the API key and every number still stands.
"What about POPIA?"	Aggregates only. No citizen personal information in scope, and the MOU forbids it.
"Where does it sit?"	Pilot in South African region or hybrid; production target inside the City tenancy with single sign-on.
"What if you disappear?"	Data in the City tenancy, open exports, continuity clauses, and no proprietary formats holding your facts hostage.
"How current is the crime data?"	March 2026 — the last quarter SAPS has released nationally, read directly from their station-level sheet across all 62 Cape Town precincts. The remaining lag is the national publication cycle. The City's own precinct extract would make it monthly.
"Refuse complaints did not double."	Correct, and the system already says so — that row is flagged awaiting verification and excluded from the counts, because the reading is 2.5 times the median of its own previous six months. July came back to baseline, which confirms it.
"So your data is wrong."	The City's extract changed shape; every consumer of that feed has the same problem. The difference is that we detect it and label it rather than printing it in a report. A number that can flag itself is worth more than one that cannot.

10

Contacts

Office of the Executive Mayor

CHANNEL	DETAIL
Executive Mayor	Ald Geordin Hill-Lewis
Office email	<code>mayor.mayor@capetown.gov.za</code>
Office telephone	021 400 1301 / 021 400 1300
Direct (gov.za directory)	<code>Geordin.hillllewis@capetown.gov.za</code>

CHANNEL	DETAIL
Physical	Civic Centre, Podium Block, Fifth Floor, 12 Hertzog Boulevard, Cape Town 8001
Postal	Private Bag X9181, Cape Town 8000
City switchboard	021 400 1111
Supply chain / tenders	tenders@capetown.gov.za · 021 400 2405 / 021 400 2505

How the City requires the meeting to be requested

All meetings are scheduled at the Executive Mayor's discretion, and the published process asks for four things in writing:

1. A clear statement of your reason for wanting to meet.
2. A list of all officials you have consulted *before* requesting the meeting.
3. A proposed agenda.
4. A list of proposed attendees and their designations.

Submit by email to mayor.mayor@capetown.gov.za, or hand-deliver into the Mayor's internal post box at the Podium Block information desk, Civic Centre.

Act on point 2 first. A request that lists Gareth Morgan and Kevin Jacoby as already consulted is materially stronger than a cold one, and it is the cheapest thing in this pack to fix.

Consult these before the Mayor

For a strategic intelligence product, the Executive Director for Future Planning and Resilience is the natural first call, and the Chief Financial Officer is the one who will interrogate the valuation method.

ROLE	NAME	WHY THEY MATTER HERE
ED: Future Planning and Resilience	Gareth Morgan	Closest institutional owner of exactly this capability — start here
City Manager	Lungelo Mbandazayo	Administrative head; any cross-directorate MOU runs through this office
CFO / ED: Finance	Kevin Jacoby	Owns the S52 tables the fiscal case needs, and will test the unit economics
ED: Water and Sanitation	Leonardo Manus	Owns system input and zone-level non-revenue water — the largest single number in the pack
ED: Urban Waste Management	Jason Mc Neil	Will immediately recognise the refuse artefact; brief before, not after
ED: Energy	Kadri Nassiep	Own-generation and plant KPIs, plus the streetlight fault series

ROLE	NAME	WHY THEY MATTER HERE
ED: Safety and Security	Vincent Botto	LEAP and Metro Police deployment counts, still unwired
Director: Communication	Priya Reddy	Any public framing of City numbers

Mayoral Committee — portfolios that touch Striops

PORTFOLIO	MEMBER	CONTACT
Finance	Cllr Siseko Mbandezi	021 444 0958 Siseko.Mbandezi@capetown.gov.za
Water and Sanitation	Cllr Dr Zahid Badroodien	021 444 7666 / 8448 Zahid.Badroodien@capetown.gov.za
Urban Waste Management	Ald Grant Twigg	021 400 1218 / 072 171 1033 grant.twigg@capetown.gov.za
Safety and Security	Cllr JP Smith	Via switchboard — email not verified
Energy	Cllr Xanthea Limberg	Via switchboard — email not verified
Urban Mobility	Cllr Roberto Quintas	Via switchboard — email not verified
Human Settlements	Cllr Carl Pophaim	Via switchboard — email not verified
Community Services and Health	Cllr Francine Higman	Via switchboard — email not verified
Economic Growth	Cllr James Vos	Via switchboard — email not verified
Corporate Services	Cllr Theresa Uys	Via switchboard — email not verified
Deputy Mayor — Spatial Planning and Environment	Ald Eddie Andrews	Via switchboard — email not verified

The three contacts above the rule were read directly from the City's own Mayoral Committee pages. The remainder are names and portfolios only. City addresses generally follow **First.Last@capetown.gov.za**, but those addresses were **not** individually verified — confirm through the switchboard on 021 400 1111 rather than guessing. Committee composition changes; re-check before sending anything.

1.1 What is still missing, and say it first

Naming the gaps yourself is worth more than being caught by them. Each of these is a specific extract, not a vague aspiration — which is what makes the pilot scope credible.
